Bui Quoc Anh (Alex Bui)

Software Engineer: Front-End & Mobile, with Go Back-End

Ho Chi Minh City, Vietnam (open to remote) | +84 378 562 998 | quocanh.job@gmail.com | github.com/quocanhdk51 | quocanhdk51.github.io

SUMMARY

Software Engineer with 6 years of experience building production web and mobile applications for healthcare, veterinary and manufacturing clients in the US, Canada and Germany. Front-end specialist in Angular, React and Ionic with TypeScript, with hands-on React Native, Flutter and Go back-end experience. Currently at CloudStorm Ventures on VetLogix, a practice management platform for veterinary clinics. Independently designed and built OmniviewLab, a multi-tenant ERP platform with a Go back-end, a 10-app React monorepo, a React Native mobile suite and an in-app AI agent with 60 business tools. Uses AI coding agents (Claude Code) inside a spec-driven workflow with tests and review gates to deliver more, faster.

SKILLS

Front-End: TypeScript, JavaScript, Angular, RxJS, NgRx, NGXS, React, Next.js, TanStack Query, Zod, HTML5, CSS3, SCSS, Tailwind CSS, Material UI, Ant Design, AG Grid, Three.js, Konva, GSAP, responsive design, accessibility

Mobile: Ionic, Capacitor, React Native, Expo, Flutter, Dart, offline-first data sync

Back-End: Go (Golang), chi, sqlc, REST APIs, Server-Sent Events, WebSockets, Protocol Buffers, RabbitMQ, Node.js, NestJS, Express, Rust (working knowledge), Ruby on Rails and Spring Boot (API integration)

Databases: PostgreSQL, MongoDB, database migrations (goose), MinIO object storage

AI & LLM: LLM agents, tool calling, LangChain, LangGraph, Anthropic Claude, Google Gemini, OpenAI, Claude Code, prompt engineering, ElevenLabs

Testing & DevOps: Vitest, Jest, React Testing Library, Jasmine, Karma, Cypress, Playwright, Docker, Kubernetes, GitHub Actions, Jenkins, Nginx, CI/CD, Turborepo, Git

Ways of working: Scrum and Agile, requirements analysis, solution design, code review, remote collaboration with teams in the US, Germany and China

EXPERIENCE

Front-End Engineer

May 2023 – Present

CloudStorm Ventures, Ho Chi Minh City, Vietnam

VetLogix · veterinary practice management platform · 2025 – Present

- Build and maintain the VetLogix web and field application in Angular and Ionic for large-animal and mobile veterinary clinics, covering scheduling, work orders, animal treatment records, inventory, invoicing and financial reporting.
- Develop field-first, responsive workflows that vets use on farms: on-site work orders, standardized treatment protocols, and inventory deducted at point of use, including partial quantities from truck stock.
- Lead the technical investigation for the planned move to React and React Native: prototype the target architecture, compare state management and offline approaches, and document migration risks and sequencing for the team.
- Support the sister product EdgeAuditor with front-end implementation and review across its React and Flutter apps.

Tech: Angular, Ionic, TypeScript, RxJS, React, React Native, Flutter

MealSuite · foodservice platform for senior living and healthcare · May 2023 – 2025

- Built modules for dietary-aware menu planning (allergies, textures, therapeutic diets), point of sale, front-of-house to back-of-house order management, table layout, and self-service kiosks and portals for residents and staff, shipped to web, iOS and Android for operators across the US and Canada.
- Designed front-end data flow and state management with NgRx and NGXS, and agreed API integration flows with the Ruby on Rails back-end team for fast screens across kiosk, tablet and desktop sizes.
- Shipped the Feedback and Staff and User Training modules, and built React and Material UI screens alongside the Angular apps.

Tech: Angular, Ionic, RxJS, NgRx, NGXS, React, Material UI, Ruby on Rails, Scrum

Front-End Developer
Oct 2020 – Apr 2023

FPT Software, Ho Chi Minh City, Vietnam · client: Schaeffler (Germany and China)

TIM: Tool Information Management · Jul 2021 – Apr 2023

- Built the Angular front end of a tool lifecycle system for Schaeffler's factory in China, letting engineers track tool usage, maintenance and scrapping to reduce production costs.
- Implemented real-time data loading with WebSockets, RxJS and state management, and large operational data grids with AG Grid.
- Gathered requirements directly with the China plant team and integrated Spring Boot APIs (PostgreSQL, MongoDB), delivered through Docker, Kubernetes and Jenkins CI/CD.

BEARINX: Bearing Design and Simulation · Oct 2020 – Mar 2023

- Built interactive 2D and 3D visualizations of bearing assemblies with Three.js and Konva in Angular, so engineers could validate designs before production.
- Worked with German engineering teams on model requirements and calculation logic, including validation that flags invalid simulation input; covered with Jasmine, Karma and Cypress tests.

Tech: Angular, RxJS, NgRx, AG Grid, Three.js, Konva, WebSockets, Spring Boot, Docker, Kubernetes, Jenkins

PROJECTS

OmniviewLab: Multi-Tenant ERP and AI Platform
Jan 2026 – Present

Creator and Lead Engineer · omniviewlab.com

- Designed and built a Go back-end (chi, PostgreSQL, pgx, sqlc, goose) with 61 domain modules, including accounting, inventory, purchasing, sales, HR, food and beverage, point of sale, manufacturing and learning management, with multi-tenancy, audit logging and idempotent, versioned writes.
- Wrote Go implementations of LangChain, LangGraph and Deep Agents patterns to power an in-app AI assistant with 60 ERP tools, permission checks, SSE streaming and plan-then-approve writes, across Gemini, Claude and OpenAI models.
- Built a React 19 and TypeScript Turborepo monorepo of 10 apps and 5 shared packages (Tailwind CSS, TanStack Query, Zod) with an offline engine and durable mutation queue, plus a React Native (Expo) monorepo of 3 mobile apps sharing models and services; tested with Vitest and Playwright.
- Split the monolith into Go microservices with an API gateway, Protocol Buffers and RabbitMQ on Kubernetes; production runs on Docker Compose and Nginx with GitHub Actions deployments.
- Delivered over 2,000 commits using Claude Code with a custom plugin marketplace and a spec-driven pipeline: specify, design, plan, implement, review, validate.

Omniview Studio: URL-to-Video-Ad Desktop App
Oct 2026 – Present

- Rust and TypeScript desktop app that captures a website with Playwright, drafts ad hooks and scripts with an LLM, adds ElevenLabs voice-over and renders drafts in 4 aspect ratios; includes a Rust game engine with physics, WebAssembly and Luau scripting.

Web Video Maker: Script-to-Narrated-Video CLI
Oct 2026

- TypeScript pnpm monorepo CLI that turns a text script into a narrated MP4: ElevenLabs word timings drive Three.js and PixiJS scenes, captured frame by frame in headless Chromium and mixed with ffmpeg. Used to produce 14 educational videos.

EDUCATION

Bachelor of Software Engineering
Sep 2016 – Apr 2021

RMIT University (Royal Melbourne Institute of Technology), Vietnam

LANGUAGES

Vietnamese (native), English (fluent)
